

## Lithium Iron Phosphate Battery

### WH12100

#### Brief Introduction

FNS POWER is offering ODM/ODM service in lithium ion battery field , mainly engaged in lead acid replacement,solar,EV, forklift and etc,. Strive our best effort to build the simple and stable battery.

#### Key Features

- Max. 4 pks in series/parallel
- Bluetooth is available
- Compact structure with holder
- Over 10 years design life
- Green energy without metal contaminant
- High capacity
- Steady output voltage
- Low self-discharge
- Temperature protection
- Withstanding very high level of vibrations and shocks
- Heating function (option)

#### Safety Characteristics

- Over-charge/Over-discharge Ability to withstand over-charge/withstand over-discharge, and there is no fire, no exploding and work well
- Short circuit Ability to withstand short circuit, and there is no fire, no exploding
- Acupuncture Ability to withstand nail puncturing, and there is no fire, no exploding
- Thermal shock Ability to withstand thermal shock, and there is no fire, no exploding

#### ● Electrical Characteristic

Nominal Voltage	12.8V
Nominal Capacity (at 0.5C, 25 degC)	100Ah
Min. Capacity (at 0.5C, 25 degC)	95Ah
Expected Cycle Life	More than 6000 cycles, with 0.2C charge and discharge rate, at 25 °C, 80%DOD

#### ● Mechanical Characteristics

Length	260±1mm
Width	172±1mm
Height	214±1mm
Net Weight	~10Kg

#### ● Operation Conditions

Charge Method	CC-CV
Charge Voltage	14.6V
Continuous Charge Current	Max. 100A
Charge Temperature	0°C~45°C
Continuous Discharge Current	Max. 100A
Peak Instant Discharge Current(5 Seconds)	300A
Discharge Cut-off Voltage	8.8V
Discharge Temperature	-20°C~65°C
Charge Temperature	0°C~45°C
Storage Temperature	-10°C~45°C
Self-Discharge (Stored at 50% SOC)	<= 3%/month

**BMS Specificatio**

Six protections are available :

- 1.Charge Protection, high quality IC effectively controls MOS to prevent battery overcharge.
- 2.Discharge Protection, prevent battery from dying and increase the lifespan.
- 3.Over current Protection, Prevent battery from being damaged by excessive instantaneous current.
- 4.Short Circuit Protection, Automatic protection during abnormal short circuit.
- 5.Temperature Protection, the NTC temperature control probe is added to prevent the damage caused by the spontaneous combustion of the battery when the temperature is too high.
- 6.Drop Protection, prevent the sampling line from falling off, and no output from PCB.

Item	Content	Criterion
<b>Over Charge Protection</b>	Over charge detection voltage	3.75±0.05V
	over charge detection delay time	2000ms
	Over charge release voltage	3.60±0.05V
	Maximum charge voltage	3.65±0.05V
	Maximum charge current	<b>≤100A</b>
<b>Over Discharge Protection</b>	Over discharge detection voltage	2.2V±0.10V
	Over discharge detection delay time	2000ms
	Over discharge release voltage	2.5V±0.10V
<b>Over Current Protection</b>	Maximum continuous current	<b>≤100A</b>
	Over current detection current	<b>300A</b>
	Over current detection delay time	2s
	Over current release condition	Cut load
<b>Short Circuit Protection</b>	Short Circuit release condition	Cut load
	Over current detection delay time	400 us
<b>Balance</b>	Balance current	35±5mA
	Start Voltage	3.50V
<b>Impedance</b>	<10 mΩ	

**Storage and Transportation**

1. Based on the character of cell, proper environment for transportation of LiFePO4 battery pack need to be created to protect the battery.
2. During transportation, 50% SOC must be kept to ensure that short circuit, appearance of liquid in the battery or immersion of battery in liquid never occur.
3. Battery should be kept at -20℃~45℃ in warehouse where it's dry, clean and well-ventilated.
4. During loading of battery, attention must be paid against dropping, turning over and serious stacking

**Optional function**

## Heating function:

1. Heating is fast and can be switched on and off quickly
2. High thermal efficiency, acid and alkali resistance, high electrical insulation strength;
3. High mechanical strength
4. Performance safety, insulating material.

## Bluetooth function:

1. Data transmission full-duplex
2. Ultra-long communication distance
3. Ultra-low power consumption
4. Support for Apple and Android phones

**Warnings and Tips**

In order to prevent the battery leaking, getting hot and exploding, please pay attention to preventing measure as following:

**Warning!**

- Never throw the battery into water, keep it under dry, shady and cool circumstance when not use.
- Never upside down the positive and negative.
- Never connect the positive and negative of battery with metal.
- Never ship or store the battery together with metal
- Never knock, throw or trample the battery.
- Never cut through the battery with nail or other edge tool.

**Tips!**

- Never use or keep the battery under the high temperature. Otherwise it will cause battery heat, get into fire or lose some function and reduce the life. The proposed temperature for long-term storage is 10-45°C.
- Never throw the battery into fire or heating machine to avoid fire, explosion and environment pollution; scrap battery should be returned to the supplier and handled by the recycle station.
- Never use the battery under strong static and strong magnetic field, otherwise it will destroy the protecting device.
- If battery leaked, the electrolyte get into eyes, please don't knead, please wash eyes by water and send to

hospital. Otherwise it will hurt eyes.

- If battery emit peculiar smell, heating, distortion or appear any unconventionality during using, storage or charging process, please take it out from device or charge and stop using.
- Never cut the battery in socket directly; please use the stated charger when charging.
- Check the voltage of battery and relevant connectors before using the battery. It can't be used until everything turns out to be normal.
- Prior to charging, fully check the insulativity, physical condition and ageing status, since breakage and ageing are never allowed; the pack voltage must not be less than the cutoff voltage, if not, it's abnormal and that battery needs to be labeled. The user should contact our Customer Service Dept and it can't be charged until repaired by our staff.
- The battery should be stored in 50% SOC. It needs to be charged once if out of use for as long as half a year.
- Clean the dirty electrode, if any, with a clean dry cloth, or poor contact or operation failure may occur.
